

Specification of the CBN Simply-Typed Lambda Calculus

Stephanie Weirich

2017

This document demonstrates the use of the Ott tool to generate \LaTeX input definitions. It uses the `ottalt` \LaTeX package available from <http://users.eecs.northwestern.edu/~jesse/code/latex/>.

1 Syntax of STLC

typ, T	$::=$	types
	\circ	base type
	$T_1 \rightarrow T_2$	function types
exp, e, v	$::=$	expressions
	x	variables
	$\lambda x. e$	abstractions
	$e_1 e_2$	applications
ctx, Γ	$::=$	typing context
	\bullet	empty context
	$\Gamma, x : T$	assumption

2 Typing rules for STLC

$\Gamma \vdash e : T$

(Typing rules)

<div style="margin-bottom: 5px;">TYPING-VAR</div> $\frac{\text{uniq}\Gamma \quad x : T \in \Gamma}{\Gamma \vdash x : T}$	<div style="margin-bottom: 5px;">TYPING-ABS</div> $\frac{\Gamma, x : T_1 \vdash e : T_2}{\Gamma \vdash \lambda x. e : T_1 \rightarrow T_2}$	<div style="margin-bottom: 5px;">TYPING-APP</div> $\frac{\Gamma \vdash e_1 : T_1 \rightarrow T_2 \quad \Gamma \vdash e_2 : T_1}{\Gamma \vdash e_1 e_2 : T_2}$
--	---	---

3 Small-step rules for STLC

$\boxed{e \longrightarrow e'}$	<i>(Small-step operational semantics)</i>
$\frac{\text{STEP-BETA}}{(\lambda x. e_1) e_2 \longrightarrow e_1[x \rightsquigarrow e_2]}$	$\frac{\text{STEP-APP} \quad e_1 \longrightarrow e'_1}{e_1 e_2 \longrightarrow e'_1 e_2}$
